SUBJECT: Presentation Skills

ROOMSYNC

Real-Time Campus Resource Booking Platform

1. Executive Summary

Mission: To eliminate wasted time and scheduling conflicts by giving every student and institution a single, real-time view of which campus resources are actually available.

Vision: To become the standard shared-resource layer for every campus — making discussion rooms, labs and equipment as easy to find and book as a cab.

Key Features: Live availability dashboard, instant conflict-free booking, filters by building/resource type, and an admin panel for institutions to manage their inventory.

2. Market Opportunity

Target Market: Colleges, universities and coaching institutes with shared spaces (discussion rooms, labs) and shared equipment (projectors, cameras, lab kits) that are not covered by the official class timetable.

Problem: Class timetables only cover scheduled academic periods. Off-timetable usage — student group studies, club meetings, equipment borrowing — is still managed through sign-up sheets, WhatsApp groups or guesswork, causing double-bookings and wasted trips.

Opportunity: RoomSync complements the existing timetable system by covering the gap it leaves open: unscheduled time and shared equipment, with a live, conflict-free booking layer.

3. Product & Technology

Product: A web-based dashboard where students see real-time status of rooms and equipment, and book a free slot instantly.

Unique Value: Instead of relying on manual sign-up sheets or informal messaging groups, students and staff get one live, always-accurate source of truth.

Technology: Built using React for the frontend and FastAPI (Python) for the backend, with a PostgreSQL database and server-side conflict detection to prevent double-bookings.

4. Business Model

Revenue Model: Institutional subscription (B2B), not per-student billing.

- Basic Plan — ₹5,000/month per institution (up to 25 resources)
- Standard Plan — ₹15,000/month per institution (up to 100 resources, admin dashboard)

- Enterprise Plan — custom pricing (multi-campus, analytics, API access)

The subscription model provides recurring, predictable revenue while giving institutions a low-cost alternative to building their own booking system.

5. Go-to-Market Strategy

- Direct outreach to college administration and student council bodies
- Free pilot programs with 2–3 institutions to gather case studies
- Campus ambassador program for word-of-mouth adoption
- Partnerships with campus library and facilities management teams

The initial focus is on individual institutions, with future opportunities for multi-campus and university-chain partnerships.

6. Competitive Advantage

RoomSync differentiates itself through real-time accuracy and conflict-free booking, purpose-built for the gap timetables leave open.

- **Real-time accuracy:** Live status — not a static, pre-planned schedule
- **Conflict-free booking:** Server-side overlap detection blocks double-bookings automatically
- **Unified view:** Rooms and equipment in one dashboard, not scattered across sheets
- **Affordable:** Institutional pricing far below building a custom in-house system

7. Financial Model

RoomSync generates revenue through monthly institutional subscriptions.

ILLUSTRATIVE GROSS MONTHLY REVENUE

INSTITUTIONS	REVENUE (PER MONTH)
5	₹75,000
20	₹3,00,000
50	₹7,50,000

Note: Figures assume an average blended subscription of ₹15,000/month per institution and represent gross revenue before operating costs, taxes and other expenses.

8. Future Growth

- WebSocket-based live updates (no manual refresh)
- QR code check-in/check-out at physical rooms
- Mobile application
- Usage analytics for institutions (peak hours, most-booked resources)
- Integration with existing timetable/ERP systems
- Expansion to multi-campus university chains

9. Milestones

Completed:

- Working prototype built (React + FastAPI + SQLite)
- Core booking flow with conflict detection implemented
- Resource dashboard with filters completed
- Sample data and demo flow ready for showcase

Next: Pilot with a partner institution, admin dashboard, payment integration.

10. Closing

RoomSync aims to make campus resource management simple, transparent and conflict-free by giving every student and institution a real-time view of what's actually available.
